

DRIVE
Secure File Storage and Sharing Platform

HAVELSAN DRIVE

Store Safely, Access Simply, Share Easily

HAVELSAN DRIVE is a secure file storage and sharing platform. This platform automatically backs up the corporate data of companies and all document and media files (photo, video and audio files) of end users. These documents can be accessed and shared via mobile (devices with iOS and Android operating systems) and web browsers within the scope of collaboration groups and authorizations.

HAVELSAN DRIVE is a system that supports Cloud Technologies, which provides secure, fast and easy access from all over the world, offers the opportunity to edit Office documents and prevents any files from being damaged by any kind of virus thanks to its file management system.

- File and Folder Sharing
- Common Groups
- Virus Protection
- Advanced Calendar Management
- E-Mail Management
- Advanced Search
- Data Encryption
- Document Scanning
- Transaction Log
- 24/7 Access
- Secure Backup

PRODUCT FEATURES

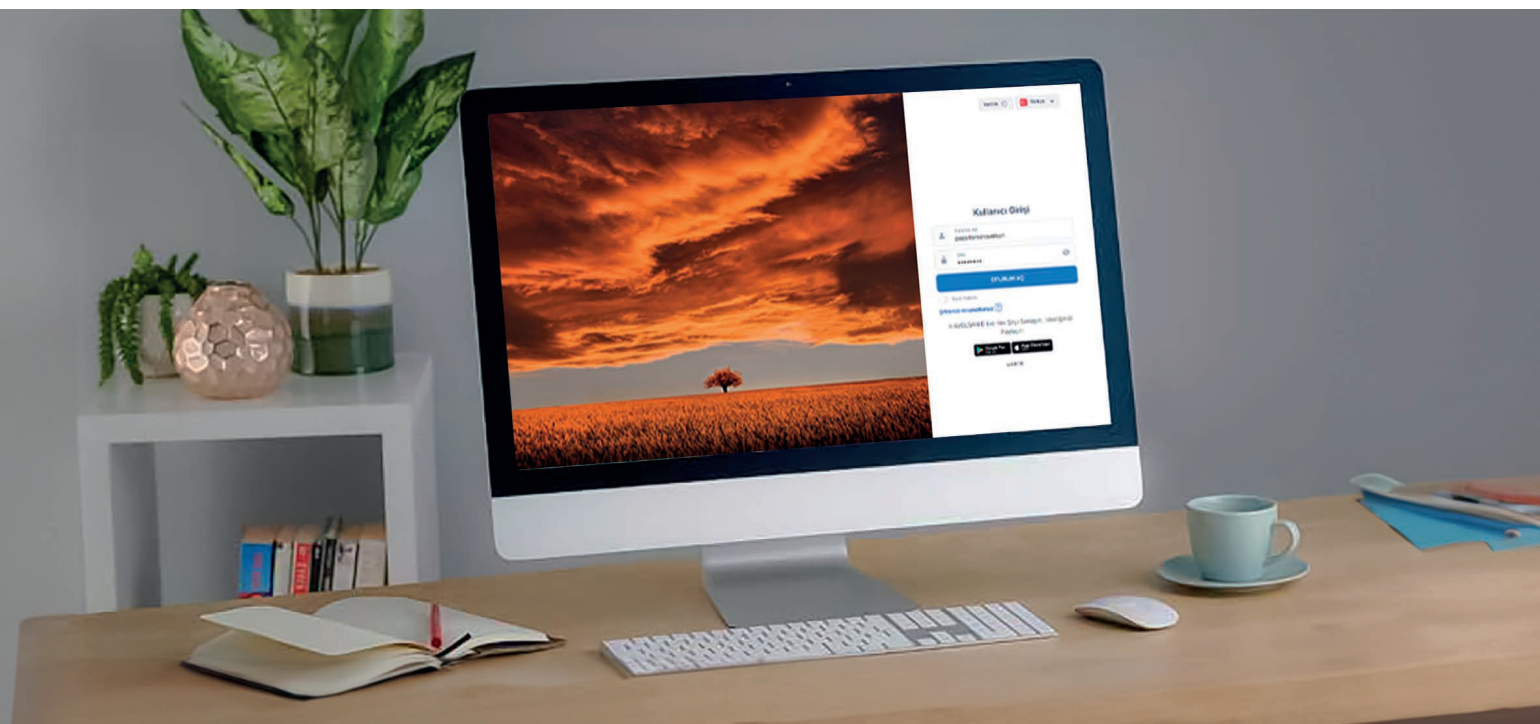

- ▶ It is possible to access files from anywhere at any time, send and share all stored files to other people instantly.
- ▶ Platform can operate on the internet or on a closed intranet between a single organization and its affiliates.
- ▶ Stored files can be shared between authorized users and can only be edited by authorized users through the platform.

- All changes applied in the files are recorded and it is possible to return to the defined time period.
- Deleted or removed files and folders can be easily restored when necessary.
- All files in the archive can be scanned, tagged, categorized and tracked.

PRODUCT FEATURES

- Users are able to transfer files between external systems via web services.
- Searching by keywords and filtering by criteria such as file type and time range are enabled.
- It is available to fragment all transferred files with system-specific dynamic algorithms and to store each part in different locations.
- All user and file activities such as Transaction Type, Transaction Date, User Name, Person Name and Surname, Computer Name, Mac Address and IP Address are logged in detail.
- Parallel backups can be applied and big data can be divided into many databases for this purpose.
- Separate backups can be enabled in all databases in parts.
